

## Unit 1 Objective 7

### Converting Scientific Notation to Standard Form

-Locate the exponent on the power of 10.

-If it's a **positive exponent**, the number is greater than 1, move the decimal to the right to change the number to standard form.

-If it's a **negative exponent**, the number is less than 1, move the decimal to the left to change the number to standard form.

Example 1:  $4.3 \times 10^6$

$4.3 \times 10^6 = 4,300,000$  move decimal 6 places to the right

Example 2:  $2.1 \times 10^{-4}$

$2.1 \times 10^{-4} = 0.0021$  move decimal 4 places to the left
