* Remember to study your vocabulary!!

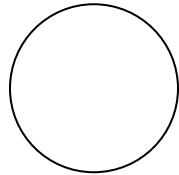

Classify each statement as true or false.

- 1) Opposite angles of an inscribed quadrilateral must be supplementary.
- 2) If a chord in one circle is congruent to a chord in another circle, the arcs of these chords must be congruent.
- 3) A diameter always bisects a chord that it intersects.
- 4) If a line bisects a chord, that line must pass through the center of the circle.
- 5) If line GM intersects a circle in just one point then it must be a tangent to the circle.
