

Webpage Design Final Project

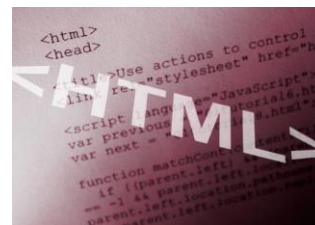

Mr. Donatelli

Web Page Design

Name: _____

Targets: I can...

- Create a professional website using Wix that teaches someone the basics of HTML and where to learn more.
- Create a professional website from scratch that teaches someone about something I am interested in.

Directions:

1. For your final project, you have **TWO** options. **Option #1:** You can create a website using Wix.com that teaches someone about the basics of HTML (Everything we learned about this year). **Option #2:** You can create a website from scratch using notepad that teaches someone something you are interested in.

2. **Option #1 Description & Requirements:**

- ✓ Your goal is to create a website using Wix that teaches someone about the basics of HTML.
- ✓ First, pick a template and url. Format colors and fonts where necessary.
- ✓ There should be five pages or tabs. You can format the layout of each page in the pages section.
 - i. **Page #1: Welcome & overview of HTML:** You should have a picture as your header, paragraph description of what HTML is & how to get started creating a website, and a table or listing of basic tags. <html>, <head>, <title>, <body>.
 - **Note:** It would be cool to insert pictures of the code. You can print scr, paste image in paint, crop, and save as a picture. Use past examples.
 - ii. **Page #2: How to create a basic webpage.** Focus on the tags needed for content. Headers, paragraphs, bold, italic, center, bullets. Show a picture as an example with code and without code. Provide 2 links to w3schools.com to learn more at bottom.
 - iii. **Page #3: How to create a basic website.** Focus on these tags. Links, images, hotspot, hyperlinks. Show a picture as an example with code and without code. Provide 2 links to w3schools.com to learn more at bottom.

- iv. **Page #4: How to create a table.** Focus on these tags. Table, tr, th, td, colspan, rowspan. Show a picture as an example with code and without code. Provide 1 link to w3schools.com to learn more at bottom.
 - v. **Page #5: CSS:** Focus on teaching about the three different styles (Inline, internal, external). Also, explain how color works. Show a picture as an example with code and without code. Provide 2 links to w3schools.com to learn more at bottom.
 - vi. **BONUS:** Add a page about Forms. Focus on these tags. Form, input, and different button tags. Show a picture as an example with code and without code. Provide 1 links to w3schools.com to learn more at bottom.
- ✓ **When done, save your website, copy the live url, and paste it in the submission box in Moodle.**

3. Option #2 Description & Requirements:

- ✓ Your goal is to create a website from scratch that teaches someone something you are interested in.
- ✓ You need at least three pages that link back and forth to each other.
- ✓ Use w3schools.com or Google to find answers to any code questions you have.
- ✓ Things I want to see at least once in the website:
 - i. Headers
 - ii. Paragraph/different fonts
 - iii. Bold/Italic
 - iv. Bullets
 - v. Center
 - vi. Images
 - vii. Hyperlinks
 - viii. Table
 - ix. CSS
 - x. **Bonus:** Form
- ✓ **Page one** should introduce the concept you are teaching them about. Use text, tables, images, videos, etc. There should be a link that goes to the next page.
- ✓ **Page two** should continue the lesson using text, tables, images, videos, etc. There should be a link that goes to the next page.
- ✓ **Page three** should be a mini quiz about the content they just read. Be creative! Use a form to help you to make interactive. There should be a link to go back home.
- ✓ You may have more than three pages!
- ✓ **When you are done your website, you are to zip the folder and submit it via Moodle.**
